Date – 01 April 2026

RETAL Baltic Films to present practical PET solutions at Interpack 2026

RETAL Baltic Films will present its latest PET-based packaging solutions at interpack 2026, focusing on practical, scalable approaches to circularity and performance that meet changing regulations.

Visitors will be welcome at the RETAL Baltic Films Hall 10 Stand C16A to explore how PET films can support 'right first time' packaging decisions as uncertainty around PPWR implementation continues.

The team will share its key focus on the shift from metallised films to coloured and transparent PET structures, improving sortability while maintaining packaging performance. RETAL Baltic Films will also present developments in mono high-barrier PET films with improved sealability, building on recent R&D projects aimed at maintaining compatibility with existing recycling systems.

Further innovations include tray-to-tray rPET films, supporting higher-value circular loops for thermoformed packaging.

Interpack will allow RETAL Baltic Films to highlight the positive reassessment of PET-based barrier structures, such as PET/PE and PET/PE/EVOH. Advances in delamination technologies and alignment with RecyClass Design for Recycling guidelines have enabled these structures to move into more favourable recyclability classifications.

A one-stop supplier of both rigid and flexible PET solutions, including thermoforming films, lidding films and printed flexible packaging films, RETAL Baltic Films' integrated approach supports consistency across packaging formats and reduces development risk for customers.

As a group, RETAL's packaging offering also includes closures designed for performance and recyclability, contributing to more aligned and efficient packaging systems.

Visitors are invited to meet the RETAL Baltic Films team at Hall 10 Stand C16A to discuss design for recycling, mono-material barrier solutions and tray-to-tray developments.

NOTE TO EDITORS

RETAL Baltic Films is a division of the multinational packaging company RETAL Industries Limited, with 10 production sites across Europe, serving global food and beverage brands in over 70 countries. RETAL Baltic Films combines industrial scale with strong technical expertise and a clear focus on PET circularity and the use of recycled content, including tray-to-tray concepts aligned with Design for Recycling guidelines and upcoming regulatory requirements. Its portfolio covers thermoforming APET and APET/PE films, top lidding films, as well as printed films for flowpacks, doypacks, and stand-up pouch formats. A modern production facility is located in the Klaipėda Free Economic Zone and supplies customers across Europe and beyond.
